Art Unit: 2832

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

First - Seventh Embodiments as noted in the specification represent Species 1-7, respectively.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

IN response to this requirement, Applicant must specify which claims read on the elected species.

The following claim(s) are generic: 1.

Art Unit: 2832

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: As noted on by the Examiner for the International Search Report mailed 11/13/01, claims 1 and 12 are anticipated by JP 11-126126 where Figs. 15-18 disclose the ring shaped resistance element 72, operating section 68 and conductive section appears to be 68. The other elements of voltage and contact are apparent from the device operation. By definition, if the prior art reads on the linking feature, the species lack the same or corresponding special technical features since no advancement can be made over the art. Claim 1 appears to link the claims, but as anticipated cannot have any special technical features.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
